

GAURAV KUMAR

E-Commerce Specialist (Salesforce Commerce Cloud) & Software Engineer

+91-989-307-2789 | gauravkr0897@gmail.com | Bangalore, India [linkedin.com/in/gauravkr-io](https://www.linkedin.com/in/gauravkr-io) | github.com/gauravkr-io

SUMMARY

E-commerce specialist with 5+ years architecting and scaling Salesforce Commerce Cloud (SFCC/SFRA) platforms — PLP/PDP, cart, checkout, OCAPI/SCAPI, and payment integrations — for global retail brands, with measurable impact on conversion and cart performance. Broadening into backend and distributed-systems engineering (Java, Spring Boot, system design, data structures & algorithms) to take on larger-scale SDE roles at product-first companies, while continuing to lead e-commerce engineering work.

EXPERIENCE

Senior Engineer, SFCC — Litmus7 Jan 2025 – Present

- Architected and led the end-to-end PLP/PDP redesign, restructuring navigation and information architecture across the discovery-to-cart journey, cutting cart abandonment by 18%.
- Designed and built OCAPI/SCAPI-based middleware services running in a cloud environment to power Azadea's mobile app, translating cross-functional business requirements into scalable API contracts.
- Own technical design decisions and sprint planning as a senior IC on the team; mentor junior engineers and run agile scrums to improve delivery velocity and stakeholder communication.
- Partner with product and architecture stakeholders to evaluate technical trade-offs early, reducing rework across mobile and web integration points.

Senior Software Developer, SFCC — Valtech Mar 2024 – Dec 2024

- Led backend development for Louis Vuitton's platform migration from ATG to SFCC Headless using Node.js, redesigning checkout backend logic and improving checkout conversion by 20%.
- Built and optimized payment-instrument and order-placement logic integrated with third-party providers, aligning technical design with partner and business requirements.
- Authored job scripts for order exports, OMS processing, and payment settlements, and maintained project documentation to support agile delivery.
- Integrated Riskified and Finor for fraud detection and transaction verification, using asynchronous processing in Node.js to keep checkout latency low.

SFCC Associate Developer — Merkle (Dentsu) Dec 2021 – Mar 2024

- Re-architected Party City's cart with custom plugins and optimized configurations, improving cart-to-checkout conversion by 28%.
- Designed and shipped multi-shipment, in-store pickup, and same-day delivery capabilities, and integrated PayPal and Klarna payment flows end-to-end.
- Built a custom marketplace PLP/PDP for a Las Vegas-based client from the ground up, owning technical design, documentation, and cross-functional delivery.
- Developed automated test suites, test cases, and administration scripts to raise release reliability and catch regressions earlier.
- Diagnosed and resolved production bugs, drove targeted performance optimizations, and stood up performance-monitoring to track system health over time.

Full Stack Developer – Intern — Katsam Group Aug 2020 – Nov 2021

- Built backend logic for PLP, PDP, and cart using the SFRA framework as part of full-stack e-commerce feature delivery.
- Developed a Java + Hibernate academic management system end-to-end, from requirements gathering through deployment.

BACKEND & SYSTEMS ENGINEERING EXPERTISE (AIRTRIBE SOFTWARE ENGINEERING PROGRAM, June 2026–PRESENT)

Real, applied backend and systems-engineering capability, developed through a structured software engineering program and complementing his primary e-commerce/SFCC specialization:

- Core Backend: Java, JVM internals & memory management, OOP & SOLID, Spring Boot, dependency injection, JPA/Hibernate & relational modeling, JWT/OAuth2 & RBAC, JUnit & Mockito, concurrency, caching, and performance profiling.
- System Design (LLD & HLD): requirement analysis, domain modeling, design patterns, capacity estimation, load balancing, caching & CDNs, SQL/NoSQL replication & sharding, consistent hashing & CAP trade-offs, microservices & service boundaries, queues/streams/WebSockets, circuit breakers, and incident response.
- Data Structures & Algorithms: linear patterns, recursion & trees, graph patterns, and dynamic programming.
- Applied AI Engineering: prompting & structured outputs, embeddings & hybrid search, function calling & agent state (MCP), evals, guardrails, and prompt-injection defense.

TECHNICAL SKILLS

E-Commerce: SFCC (SFRA, SGJC), OCAPI, SCAPI, REST APIs, GraphQL

Languages: Java, JavaScript, jQuery, Node.js

Data & Storage: MongoDB, MySQL

Tools & Practices: Git, Controllers/Models/Forms, Agile/Scrum

Also Skilled In: Spring Boot, JPA/Hibernate, System Design, Concurrency, JUnit/Mockito, DSA

EDUCATION

Bachelor of Engineering, Computer Science

Shivajirao Kadam Institute of Technology & Management, Indore — 2020

CERTIFICATIONS

- Salesforce B2C Commerce Certified Developer (2023)
- Full-Stack Java Developer — Simplilearn
- GATE 2021 Qualified

AWARDS & RECOGNITION

- Sparks Award (Valtech) — mentoring and delivery excellence
- CLIMB HIGH Award (Merkle) — cart revamp impact
- Recognized for marketplace and seasonal template development
